Week 3 Reflection*

Angel Xu

September 19, 2024

I use data form opendatatoronto to analyze marriage dates. I did data cleaning and tests to produce a better data for analysis.

1 Introduction

I used the analysis data to analyze the number of marriage in every year from the start date to observe the change in marriage number.

2 Data

Data I used are all form opendatatoronto.

In the graph above, I used the variable year as x-axis to view the number of marriage in every year from the start date. From the bars, I can view the change in marriages.

3 Discussion

3.1 First discussion point

If my paper were 10 pages, then should be be at least 2.5 pages. The discussion is a chance to show off what you know and what you learnt from all this.

3.2 Weaknesses and next steps

The number of marriage is large and hard to see the difference.
